	<i>Preface to the Second Edition</i>	<i>page xv</i>
	<i>Preface to the First Edition</i>	<i>xvii</i>
	Part I Stellar Properties	
1	Introduction	3
	1.1 Observational versus Physical Properties of Stars	3
	1.2 Powers-of-Ten Scale Steps from Us to the Universe	6
	1.3 Questions and Exercises	8
2	Astronomical Distances	11
	2.1 Angular Size	11
	2.2 Trigonometric Parallax	13
	2.3 Determining the Astronomical Unit (au)	15
	2.4 Solid Angle	16
	2.5 Questions and Exercises	17
3	Stellar Luminosity	19
	3.1 “Standard Candle” Methods for Distance	19
	3.2 Intensity or Surface Brightness	20
	3.3 Apparent and Absolute Magnitude and the Distance Modulus	21
	3.4 Questions and Exercises	22
4	Surface Temperature from a Star's Color	25
	4.1 The Wave Nature of Light	25
	4.2 Light Quanta and the Blackbody Emission Spectrum	26
	4.3 Inverse-Temperature Dependence of Wavelength for Peak Flux	27
	4.4 Inferring Stellar Temperatures from Photometric Colors	28
	4.5 Questions and Exercises	29
5	Stellar Radius from Luminosity and Temperature	32
	5.1 Bolometric Intensity	32

	5.2 The Stefan–Boltzmann Law for Surface Flux from a Blackbody	32
	5.3 Questions and Exercises	33
6	Composition and Ionization from Stellar Spectra	35
	6.1 Spectral Line Absorption and Emission	35
	6.2 Elemental Composition of the Sun and Stars	37
	6.3 Stellar Spectral Type: Ionization as a Temperature Diagnostic	38
	6.4 Hertzsprung–Russell (H–R) Diagram	39
	6.5 Questions and Exercises	41
7	Surface Gravity and Escape/Orbital Speed	43
	7.1 Newton’s Law of Gravitation and Stellar Surface Gravity	43
	7.2 Surface Escape Speed V_{esc}	44
	7.3 Speed for Circular Orbit	45
	7.4 Virial Theorem for Bound Orbits	46
	7.5 Questions and Exercises	46
8	Stellar Ages and Lifetimes	49
	8.1 Shortness of Chemical Burning Timescale for the Sun and Stars	49
	8.2 Kelvin–Helmholtz Timescale for Gravitational Contraction	49
	8.3 Nuclear Burning Timescale	50
	8.4 Age of Stellar Clusters from Main-Sequence Turnoff Point	51
	8.5 Questions and Exercises	52
9	Stellar Space Velocities	54
	9.1 Transverse Speed from Proper Motion Observations	54
	9.2 Radial Velocity from Doppler Shift	56
	9.3 Questions and Exercises	57
10	Using Binary Systems to Determine Masses and Radii	59
	10.1 Visual (Astrometric) Binaries	59
	10.2 Spectroscopic Binaries	61
	10.3 Eclipsing Binaries	63
	10.4 Mass–Luminosity Scaling from Astrometric and Eclipsing Binaries	64
	10.5 Questions and Exercises	65
11	Stellar Rotation	69
	11.1 Rotational Broadening of Stellar Spectral Lines	69
	11.2 Rotational Period from Starspot Modulation of Brightness	71
	11.3 Questions and Exercises	72

	Contents	ix
12	Light Intensity and Absorption	74
	12.1 Intensity versus Flux	74
	12.2 Absorption Mean-Free-Path and Optical Depth	76
	12.3 Interstellar Extinction and Reddening	77
	12.4 Questions and Exercises	79
13	Observational Methods	82
	13.1 Telescopes as Light Buckets	82
	13.2 Angular Resolution	83
	13.3 Radio Telescopes	84
	13.4 Space-Based Missions	85
	13.5 Polarimetry: Detecting Linear and Circular Polarization	86
	13.6 Time-Domain Astronomy	87
	13.7 Questions and Exercises	88
14	Our Sun	90
	14.1 Imaging the Solar Disk	90
	14.2 Corona and Solar Wind	93
	14.3 Convection as a Driver of Magnetic Structure and Activity	95
	14.4 Questions and Exercises	97
	Part II Stellar Structure and Evolution	
15	Hydrostatic Balance between Pressure and Gravity	101
	15.1 Hydrostatic Equilibrium	101
	15.2 Pressure Scale Height and Thinness of Surface Layer	103
	15.3 Hydrostatic Balance in the Stellar Interior and the Virial Temperature	104
	15.4 Questions and Exercises	105
16	Transport of Radiation from Interior to Surface	107
	16.1 Random Walk of Photon Diffusion from Stellar Core to Surface	107
	16.2 Diffusion Approximation at Depth	108
	16.3 Radiation Pressure	109
	16.4 Atmospheric Variation of Temperature with Optical Depth	110
	16.5 Questions and Exercises	111
17	Structure of Radiative versus Convective Stellar Envelopes	112
	17.1 $L \sim M^3$ Relation for Hydrostatic, Radiative Stellar Envelopes	112
	17.2 Horizontal-Track Kelvin–Helmholtz Contraction to the Main Sequence	113
	17.3 Convective Instability and Energy Transport	113

x	Contents	
	17.4 Hayashi Track Contraction of Fully Convective Proto-Stars	116
	17.5 Questions and Exercises	117
18	Hydrogen Fusion and the Mass Range of Stars	120
	18.1 Core Temperature for Hydrogen Fusion	120
	18.2 Main-Sequence Scalings for Radius–Mass and Luminosity–Temperature	122
	18.3 Lower Mass Limit for Hydrogen Fusion: Brown-Dwarf Stars	123
	18.4 Upper Mass Limit for Stars: The Eddington Limit	124
	18.5 Questions and Exercises	125
19	Post-Main-Sequence Evolution: Low-Mass Stars	128
	19.1 Hydrogen-Shell Burning and Evolution to the Red-Giant Branch	128
	19.2 Helium Flash to Horizontal Branch Core Burning	131
	19.3 Asymptotic Giant Branch to Planetary Nebula to White Dwarf	132
	19.4 White-Dwarf Stars	133
	19.5 Chandrasekhar Limit for White-Dwarf Mass: $M < 1.4M_{\odot}$	134
	19.6 Questions and Exercises	134
20	Post-Main-Sequence Evolution: High-Mass Stars	137
	20.1 Multiple Shell Burning and Horizontal Loops in the H–R Diagram	137
	20.2 Core-Collapse Supernovae	139
	20.3 Neutron Stars	140
	20.4 Black Holes	140
	20.5 Observations of Stellar Remnants	142
	20.6 Gravitational Waves from Merging Black Holes or Neutron Stars	144
	20.7 Multi-Messenger Astronomy	147
	20.8 Questions and Exercises	149
	Part III Interstellar Medium and Formation of Stars and Planets	
21	The Interstellar Medium	155
	21.1 Star–Gas Cycle	155
	21.2 Cold–Warm–Hot Phases of Nearly Isobaric ISM	156
	21.3 Molecules and Dust in Cold ISM: Giant Molecular Clouds	159
	21.4 HII Regions	161
	21.5 Galactic Organization and Star-Gas Interaction along Spiral Arms	163
	21.6 Questions and Exercises	164
22	Star Formation	166
	22.1 Jeans Criterion for Gravitational Contraction	166
	22.2 Cooling by Molecular Emission	167

	Contents	xi
	22.3 Free-Fall Timescale and the Galactic Star-Formation Rate	168
	22.4 Fragmentation into Cold Cores and the Initial Mass Function	168
	22.5 Angular Momentum Conservation and Disk Formation	170
	22.6 Questions and Exercises	172
23	Origin of Planetary Systems	175
	23.1 The Nebular Model	175
	23.2 Observations of Proto-Planetary Disks	175
	23.3 Our Solar System	177
	23.4 The Ice Line: Gas Giants versus Rocky Dwarfs	178
	23.5 Equilibrium Temperature	179
	23.6 Questions and Exercises	179
24	Water Planet Earth	182
	24.1 Formation of the Moon by Giant Impact	182
	24.2 Water from Icy Asteroids	182
	24.3 Our Magnetic Shield	183
	24.4 Life from Oceans: Earth versus Icy Moons	184
	24.5 Questions and Exercises	185
25	Extra-Solar Planets	187
	25.1 Direct-Imaging Method	187
	25.2 Radial-Velocity Method	187
	25.3 Transit Method	189
	25.4 The Exoplanet Census: 4000+ and Counting	191
	25.5 Search for Earth-Size Planets in the Habitable Zone	192
	25.6 Detecting Molecules and Biosignatures in Transiting Planets	193
	25.7 Questions and Exercises	196
	Part IV Our Milky Way and Other Galaxies	
26	Our Milky Way Galaxy	201
	26.1 Disk, Halo, and Bulge Components of the Milky Way	201
	26.2 Virial Mass for Clusters from Stellar Velocity Dispersion	205
	26.3 Galactic Rotation Curve and Dark Matter	205
	26.4 Supermassive Black Hole at the Galactic Center	208
	26.5 Questions and Exercises	211
27	External Galaxies	213
	27.1 Cepheid Variables as Standard Candles to External Galaxies	213
	27.2 Galactic Redshift and Hubble’s Law for Expansion	215

xii	Contents	
	27.3 Tully–Fisher Relation	216
	27.4 Spiral, Elliptical, and Irregular Galaxies	218
	27.5 Role of Galaxy Collisions	220
	27.6 Questions and Exercises	221
28	Active Galactic Nuclei and Quasars	223
	28.1 Basic Properties and Model	223
	28.2 Lyman- α Clouds	225
	28.3 Gravitational Lensing of Quasar Light by Foreground Galaxy Clusters	226
	28.4 Gravitational Redshift	228
	28.5 Apparent “Superluminal” Motion of Quasar Jets	229
	28.6 Questions and Exercises	229
29	Large-Scale Structure and Galaxy Formation and Evolution	232
	29.1 Galaxy Clusters and Superclusters	232
	29.2 Lensing of Colliding Galaxy Clusters Confirms Dark Matter	234
	29.3 Dark Matter: Hot versus Cold, WIMPs versus MACHOs	234
	29.4 Galaxy Evolution over Cosmic Time	237
	29.5 Questions and Exercises	239
	Part V Cosmology	
30	Newtonian Dynamical Model of Universe Expansion	243
	30.1 Critical Density	243
	30.2 Gravitational Deceleration of Increasing Scale Factor	244
	30.2.1 Empty Universe, $\Omega_m = 0$	246
	30.2.2 Critical Universe, $\Omega_m = 1$	246
	30.2.3 Closed Universe, $\Omega_m > 1$	247
	30.2.4 Open Universe, $\Omega_m < 1$	247
	30.3 Redshift versus Distance: Hubble Law for Various Expansion Models	247
	30.4 Questions and Exercises	249
31	Accelerating Universe with a Cosmological Constant	251
	31.1 White-Dwarf Supernovae as Distant Standard Candles	251
	31.2 Cosmological Constant and Dark Energy	252
	31.3 Critical, Flat Universe with Dark Energy	254
	31.4 The “Flatness” Problem	257
	31.5 Questions and Exercises	258
32	The Hot Big Bang	260
	32.1 The Temperature History of the Universe	260

	Contents	xiii
32.2	Discovery of the Cosmic Microwave Background	261
32.3	Fluctuation Maps from the COBE, WMAP, and Planck Satellites	262
32.4	Baryonic Acoustic Oscillations as a Standard Ruler	264
32.5	Questions and Exercises	265
33	Eras in the Evolution of the Universe	267
33.1	Matter-Dominated versus Radiation-Dominated Eras	267
33.2	Recombination Era	268
33.3	Era of Nucleosynthesis	271
33.4	Particle Era	272
33.5	Era of Cosmic Inflation	274
33.6	Questions and Exercises	276
Appendix A	Atomic Energy Levels and Transitions	279
Appendix B	Equilibrium Excitation and Ionization Balance	284
Appendix C	Atomic Origins of Opacity	287
Appendix D	Radiative Transfer	291
	<i>Index</i>	295
